¹ Seed treatments were applied using an overhead spray system at the Hancock Agricultural Research Station on cut, suberized seed pieces of Russet Burbank 24 h prior to planting. In-furrow insecticide applications were applied in a 4" band over cut, suberized seed pieces placed in an open furrow using a CO₂ pressurized, backpack sprayer delivering 9.9 gpa at 30.0 psi with a single hollow-cone nozzle (TXVS-6). Seed treatment applications were applied 25 April and in-furrow applications applied 26 April, 2013.

VI. 2013, Additional Vegetable Insect Research.**I. European corn borer (*Ostrinia nubilalis*) and corn earworm (*Helicoverpa zea*) control in succulent snap bean:**

Improved application techniques for the control of European corn borer in succulent snap bean. Investigating the influence of soil-applied, water-soluble anthranilic diamides for the control of ECB in snap beans. Tank mix applications with herbicide and fungicides. Experiments performed in cooperation with Del Monte Foods, Plover, WI.

II. Current season management of Potato Virus Y (PVY) in seed potato production:

Limiting the current season spread of PVY using novel foliar crop protectant technologies to meet certification requirements of the Wisconsin Certified Seed Potato Program. Experiments performed in cooperation with Langlade County Cooperative Extension, Antigo, WI.
